

Dell Optiplex 3020 SFF and MT Hidden UEFI Settings

Command	Variable	Value	Function
setup_var	0xD9E	0x0	Disable CFG Lock
setup_var	0x263	0x2	Set DVMT to 64MB
setup_var	0x2	0x1	Enable EHCI Handoff
setup_var	0x144	0x1	XHCI Enabled Mode
setup_var	0x15A	0x2	Route EHCx to XHCI
setup_var	0x146	0x0	Disable EHCx Ports
setup_var	0x147	0x0	Disable EHCx Ports

These should not be used for the Dell Optiplex 3020M (micro)

Make these changes via a modified GRUB Shell to optimize your Dell Optiplex for running any macOS version from Mavericks to Monterey.

Do not make these changes if you will be booting Windows or Linux in legacy mode. Use UEFI only.
